

GRX-TVI – Ten Volt Interface

- 100-277 V~ forward, reverse, and center phase control input capability
- Provides 0–10 V- control and switching capabilities to switch and dim current sourcing fluorescent ballasts and LED drivers.
- Switches and dims current sourcing 0–10 VDC electronic dimming ballasts/drivers powered by 100–277 VAC. Switches up to 16 A of electronic capacitive ballasts/drivers.
