

RS-2P-120/277 – TWO-POLE STEP RELAY MODULE

This is the Two-Pole Step Relay Module.

- Works with step ballasts to provide multi-level lighting control from a single panel slot.
- Utilizes dual 30A relays that are each de-rated to 16A
- Each module incorporates the latest in “zero-cross” switching technology to greatly extend relay switching life.
- Relay Modules communicate with the Master Interface to report:
 - The relay’s current state (on/off)
 - The line source state (available or off)
 - The communication status (active / not available)
 - The relay’s “health.” (if the relay is defective)
